

Bibi Aremieye

Fullstack Engineer

📍 Hamburg, Germany ✉️ bibirinbulu.aremieye@gmail.com ☎️ +4915219495319 🔗 [Portfolio](#)

PROFILE

Fullstack Engineer with over 6 years of experience building high-performance web applications and cloud-native systems. Deeply proficient across JavaScript/Typescript and Python ecosystems (React, Next.js, Node.js(Nest.js/Express.js), FastAPI) with a proven track record of migrating complex engineering architectures into highly scalable, containerized cloud environments. Expert at bridging product design with clean code, optimizing automated delivery pipelines and maintaining resilient user experiences across multi-cloud infrastructure.

TECHNICAL SKILLS

Languages

JavaScript, TypeScript, Python, HTML, CSS, SASS

Cloud & Devops

GCP (GKE, Artifact Registry, Secret Manager, Cloud SQL, Cloud Storage), AWS (EKS, IAM, S3, EC2 Instance), Microsoft Azure, Docker, Kubernetes, Helm, ArgoCD, CI/CD, SonarQube, Jest, Cypress, TDD, Terraform

Frontend Technologies

React, React-Router v7, NextJS, Vue/Nuxt, Redux/Toolkit, React Query, Tailwind CSS, Styled Components

Backend Technologies

Node.js, NestJS, Express.js, FastApi, REST, GraphQL

Testing & Tools

Jest, Cypress, Git, GitHub, GitLab, SonarQube, Docker, Kubernetes, Helm, ArgoCD, CI/CD, Agile, Kanban, Jira, TDD

AI Assisted Tool

Cursor, Claude, Codex

PROFESSIONAL EXPERIENCE

Software Engineer, [Dr. Ansay AU-Schein GmbH](#)

Sep 2025 – Present | Remote / Berlin

- **Core Feature Development:** Built and improved critical parts of the app like age verification, checkout pages, and inventory tracking. Used **NestJS** to keep the backend solid and **React Router v7** to make switching between pages smooth and fast, creating a much more reliable shopping setup for users.
- **Shared Code Library:** Moved separate UI pieces into a single, shared code library used across all company websites. This kept the visual design exactly the same everywhere and saved the engineering team a lot of time when building new features.
- **Automated Testing & Pipelines:** Used **GitHub Actions** to build automated pipelines that package the app into **Docker** containers and run them safely on **Kubernetes** clusters. Wrote **Unit tests** and used **Playwright** to test real browser behavior automatically, which helped catch and fix bugs before the code ever went live to users.
- **AI-Assisted Coding:** Worked with modern AI tools like **Cursor** and **Claude** to speed up daily development. Used them to write basic setup code faster, double-check code for errors, write clear technical documentation, and test new API connections quickly.

Full-Stack Engineer/ Frontend Engineer, [LG-LHT Passenger Solutions GmbH](#)

Jul 2022 – Feb 2025 | Hamburg

- **Frontend Development:** Developed the main passenger application for the airplane's entertainment system using **React** and **Next.js**. Optimized page loading and data caching to give passengers a fast, smooth browsing experience even during weak, in-flight network conditions.
- **Backend APIs:** Built reliable backend APIs using **NestJS** and **Java (Spring Boot)** to cleanly connect the passenger application with the admin control dashboard, ensuring secure data sharing and real-time updates.
- **Deployment & Cloud:** Managed app deployments using **Kubernetes** and **Helm** to safely roll out system updates with zero downtime. Integrated **Microsoft Azure Blob Storage** to handle large media assets and passenger video uploads smoothly.
- **Database & Payments:** Managed the core product catalog and payment checkout systems. Rewrote and structured **PostgreSQL** database tables to eliminate slow search queries, fix bugs, and speed up overall transaction times.

- **Team Leadership & Frontend:** Led the frontend development team for a tech-on-demand application. Handled picking the core technologies like **React** and **Redux**, ran regular code reviews to keep the code clean, and managed the team's workflow to meet product deadlines.
- **Secure Integrations & Cloud:** Integrated a secure checkout and payment setup using **Adyen**, and handled safe user sign-ins and account security through **Auth0**. Deployed and managed these core app services on **AWS** to keep everything running reliably.
- **Full-Stack Internal Tools:** Built several administrative management tools and public websites completely from scratch using **React**, **Next.js**, and **Node.js** to help internal teams work faster and more efficiently.
- **Client Consulting:** Worked as a technical consultant for external business clients (such as *Fichaya*), where I took care of their data dashboards and helped them successfully launch new software features to grow their business.

PROJECTS

Leihhub, Lead Fullstack & Cloud Infrastructure Engineer

Apr 2026 – Present

- **Web Engineering & SEO:** Developed a responsive web application using **Next.js** and **React**, leveraging **Server-Side Rendering (SSR)** and Static Site Generation (SSG) to optimize web performance and core web vitals.
- **Mobile Engineering:** Architected a cross-platform mobile application using **React Native** and **TypeScript**, enforcing atomic component structures, native phone feature integrations and custom hooks for global state coordination.
- **2 Backends Mode Architecture:** Engineered a pluggable data and authentication abstraction layer toggled seamlessly via **environment variable**, allowing the platform to dynamically switch between **Supabase** (executed via **Next.js server-side** architectures) and asynchronous standalone **Python (FastAPI)** backend.
- **Cloud Infrastructure & IaC:** Utilized **Terraform** to implement declarative Infrastructure as Code (IaC), provisioning **Google Kubernetes Engine (GKE)** clusters, secure VPC networks, isolated **Google Artifact Registry** environments, and configuring **Kubernetes Ingress controllers** linked with external HTTP(S) Load Balancers to manage routing, handle TLS termination, and securely expose public production domains.
- **GitOps & CI/CD Automation:** Built an automated deployment pipeline utilizing **GitHub Actions** for continuous integration (linting, testing, and multi-stage Docker builds) paired with **ArgoCD** to drive GitOps-based, declarative continuous delivery directly into the GKE cluster.
- **Kubernetes Security & Secrets Management:** Architected a zero-trust credential model inside GKE by attaching **Google Cloud Secret Manager** to Kubernetes workloads via the **Secrets Store CSI Driver**, securely mounting runtime variables.
- **Backend Architecture:** Developed an asynchronous backend API using **Python** and **FastAPI**, maximizing database via optimized relational schemas and asynchronous connection pooling via **SQLAlchemy** and **PostgreSQL**.
- **Fintech & Escrow Systems:** Engineered multi-party programmatic payment routines using **Stripe API infrastructures**, implementing multi-wallet configurations to isolate client funds safely in escrow while meeting EU PSD2 digital compliance.
- **AI Agent Orchestration:** Integrated stateful **agentic workflows** using Python intelligence frameworks to handle automated item classification, visual damage inspection models, and automated market-rate rental pricing calculations.

EDUCATION

Mechanical Engineering - B.Eng., Niger Delta University

2006 – 2012
